

Sales Performance Dashboard

1. Purpose

The dashboard provides an interactive overview of the cleaned Sample Superstore dataset, focusing on **Sales, Profit, Quantity, product categories, regions, and sub-categories**.

2. Key Performance Indicators (KPIs)

The three KPI cards provide a quick summary of overall performance:

- **Total Sales** – Overall sales generated from all orders.
- **Total Profit** – Overall profit generated from all orders.
- **Total Quantity** – Total number of products sold.

3. Dashboard Visuals

- **Total Sales by Category** – Compares sales across Technology, Furniture, and Office Supplies.
- **Total Sales by Region** – Compares sales across the West, East, Central, and South regions.
- **Total Sales by Sub-Category** – Shows detailed sales performance across individual product sub-categories.

4. Region Filter

The Region slicer allows users to select Central, East, South, or West. Selecting a region automatically updates the KPI cards and charts to show the selected region's performance. Clearing the selection returns to the overall view.

5. Dataset Note

The cleaned Sample Superstore dataset does not contain a **Date/Month** field. Therefore, monthly analysis and a month filter were not included.

Conclusion

The dashboard provides a simple interactive view of key sales metrics and allows stakeholders to explore **product and regional sales performance**.
